Announces Fire Retardant Tarp that can Help Reduce Costs and Improve Efficiency During Winter Months

Quality Construction and Wide Selection Allow Strong Man to Satisfy any Tarp Requirement

FAIRFIELD, NJ

Strong Man Building Products Corp., a market leader in weather and debris enclosures, announces that its fire retardant tarp can save general contractors and scaffolding companies money and time, while also improving efficiency during the winter months.

Constructed with high quality materials and having high tensile strength, Strong Man's fire retardant tarp can save on installation costs, is less apt to tear, and can help control heating costs during the colder months, less replacement.

The fire retardant tarp is constructed with heavy-duty stitching and rust-proof grommets. Designed for vertical applications, it features a 10x10 weave of ultra-strong woven polyethylene material at 4.5 oz. per square yard and has re-enforcing in the hems. Further fortifying the tarp is rope in the hem. It is also waterproof.

Strong Man also offers its traditional Poly Tarp that combines extra strength and professional quality. It is water proof, tear proof, U.V. treated and lightweight. It also features rust proof grommets and has rope in the hem. The Poly Tarp has unlimited uses ranging from covering materials to protecting cars and trucks from the elements.

For job sites that require fire retardant tarps, Strong Man offers a series of high quality choices. The standard FR Tarp's woven poly material in a 10x10 weave, 4.5 oz per square yard, rope in the hem, and rust proof

grommets down the middle give it unlimited uses.

For job sites that require more durable tarps, the Super FR is available. Ultra strong, it has a 14x14 weave, 4" hem, and D-rings with webbing.

Strong Man's Mighty Tarp delivers high wind protection, making it ideal for high-rise construction applications. It is constructed with 18 oz. reinforced PVC, 4" hem, and D-rings with webbing.

By offering the widest range of weather protection, Strong Man can serve as a single source for all tarps on a construction site. Additionally, Strong Man supports all of its tarps through its "On the Spot" Delivery program that guarantees same day shipment of an ordered debris netting or tarp. The program ensures that customers who order before 2:00 p.m.

EST will have their product shipped the same day.

Strong Man Building Products Corp. is a manufacturer of heavy duty, all seasons netting and tarp for debris and weather enclosures.

Since 1974, its products have been widely used by construction companies, subcontractors, and utility companies on job sites, demolition sites, storage areas, and material yards. They are used as sand blast curtains, scaffold enclosures, vision barriers, and wind and heat protection.

Strong Man's enclosures meet OSHA specifications and are wind resistant and flexible, even in cold weather. ■
