

CUT & SPEC SHEET

Strong Man QuickCure Concrete Curing Blanket

The Strong Man QuickCure concrete curing blanket is a winter enclosure tarpaulin used in cold weather areas during general construction and industrial maintenance to cure concrete. QuickCure is an 8x8 weave poly tarp with layered closed-cell PE foam cores. Each QuickCure blanket is manufactured with polycarbonate grommets every 3' around all finished stitched edges for ease of installation. QuickCure curing blankets are designed to hold up in low temperatures and to aid in the curing process. Fabricated to help insulate and control temperatures, QuickCure curing blankets are resistant to sunlight, moisture and mildew. The core stays dry, allowing the QuickCure blanket to control the temperature so concrete can achieve the maximum possible strength.

FEATURES

- ▶ High-Strength Coated woven polyethylene with closed-cell PE foam core
- ▶ 8x8 weave per square inch
- ▶ Insulation: Closed-cell PE foam core (polyethylene)
- ▶ Foam thickness: 3/8" or 1/2"
- ▶ Silver & Black in color
- ▶ Edges are hemmed, double-stitched & reinforced with poly carbonate grommets
- ▶ Mildew & weather-resistant
- ▶ UV-treated
- ▶ Non-fire retardant
- ▶ Economical & Cost-Effective
- ▶ Lightweight & Long-Lasting
- ▶ Simple to handle, simple to install
- ▶ Performs well in low temperatures
- ▶ 100% reusable

USES

- ▶ Concrete curing blanket
- ▶ Temporary heat enclosure
- ▶ Temporary walls, covers, ground cover (non-fire retardant)

SIZES & AVAILABILITY

- ▶ 6' x 25', 2 Layer, 3/8" Foam Insulation
R-Value on Surface = 1.35
R-Value with Air Space = 3.30
- ▶ 6' x 25', 3 Layer, 1/2" Foam Insulation
R-Value on Surface = 1.50
R-Value with Air Space = 3.43

GO STRONG ALL YEAR LONG
